

Required software:

- NetBeans

Instructions to build and run:

1. Once the file is unzipped and "CSC499_HW1" in a location such as desktop.
2. Open NetBeans.
3. Click file on the top left.
4. Click open project.
5. Navigate to save location of "CSC499_HW1" folder. It should have a special icon over it.
6. Select "CSC499_HW1" folder and click "Open Project".
7. On the left side there shall be a "CSC499_HW1" that you can double click or click the "+" next to expand.
8. Then through the same method as above expand the "Source Packages".
9. Then through the same method as above expand the "csc499_hw1".
10. Then double click the "CSC499_HW1.java". This should bring up the code in a tab next to the "Start Page".
11. Click the green arrow in the bar above the tabs of the project and the "Start Page" to run the program.
12. There shall be an output window pop up from the bottom of the screen with the sorted list.

Instructions to sort a different list:

1. Navigate to where the "CSC499_HW1" folder is stored (Where you unzipped it to).
2. Open the "CSC499_HW1" folder.
3. Open the "src" folder.
4. Place the file that has the names you want sorted. Make sure its name "Sort Me.txt".
5. Click ok to replace file or remove the old "Sort Me.txt" and then do step 4 again.
6. You can now go to the instructions to build and run step 2 to run it.
